

BOTANICAL IMAGES - WILDFLOWERS, GRASSES & SEDGES

The following is a list of drawings (field sketches) that are available in the archives of the Midwest Center for Botanical Documentation.

All are black and white drawings (pen and black ink) completed in the field that highlight the botanical characteristics of each species in some considerable detail. Typical examples of Derek Norman's field sketches are shown alongside the following list.

While the list of images continues to grow it currently includes the following common, rare, threatened and endangered species of wildflowers, grasses and sedges native to Illinois.

Images are available as hard copies or on disk.
